I PART. Reading Comprehension

A. Read the text. Then, complete it with the words below. Drag the answers and drop them in the corresponding space. (7 points)

Pregunta 1

Correcta

Se puntúa 7,00 sobre 7,00

What is Web Design and Website Development?

Web design and development create websites and applications that are ✓ to use, visually ✓, and accessible to a wide range of devices.

Web design is the visual aspect of a website or application. It includes everything from the ✓, colors, graphics, and images to the site's typography. Web developers are responsible for designing these aspects. A web developer will also create a site map for the website or ✓ before it goes live.

Web development makes a site or application work in the first place. It includes programming scripts, server configuration, database management, and more. Web developers do not need to know about ✓ design. Still, they need to understand how to create an ✓ user interface that is responsive across devices such as smartphones, tablets, and desktop computers.

Another great alternative is Web flow development, which allows designers to construct websites visually without programming skills. Webflow produces a ✓ site in its own semantic code, but the developer can construct the site in a visual system.
